

WHEELCHAIR AND LEG SUPPORT ACCESSORY**ABSTRACT OF THE DISCLOSURE**

5 A leg support accessory for a wheelchair including a leg rest
wider than the wheelchair seat, a vertical support secured at an upper end to
the leg rest and including in its lower end a downwardly open recess adapted
to receive the foot rest supports, and first and second braces each fixed on one
end to the vertical support and at the other end having an opening adapted to
10 fixedly receive one of the arm support posts. When the accessory is used with
the wheelchair, the braces receive arm support posts on opposite sides of the
seat, and the foot rest supports in their raised position are received in the
vertical support recess with the leg rest supported in a substantially horizontal
orientation with lateral ends extending beyond the sides of the seat.
